

PBI2212 Battery Booster

Power that just keeps on delivering

Portable Professional Power - PBI2212 Battery Booster

Choosing a Booster Pack

When buying a booster pack you are getting a very powerful piece of equipment that has the potential to do damage to the vehicle. However, if correctly used, will be safe, easy to use and provide the energy necessary to start a vehicle.

The Schumacher PBI2212 battery booster delivers all the necessary functions and added features that help it to produce great power for long periods, without the need for constant recharging – providing a long life for the booster itself.

Hawker EnerSys Battery

It is generally acknowledged that the best battery for use in a booster pack is called the Hawker EnerSys battery – this is used in the Schumacher PBI2212. The power output and longevity of the Schumacher PBI2212 put it head and shoulders above its competition.

Constructed so that it has less internal resistance

it can deliver more power for longer without overheating the Hawker EnerSys battery. This ensures that the Schumacher PBI2212 delivers unrivalled performance.

Longer Lasting Performance

Lead plates give the PBI2212 battery booster a much longer shelf life than alternative boosters. With the ability to recover from deeper discharge quickly, typically the Schumacher PBI2212 battery booster can be used to charge and discharge over 2,000 times compared to less than 1,000 with a cheaper alternative.

“We have started over 40 vehicles with flat batteries and not had to charge the unit once – and it still shows 11.7v”

- CBS Chichester

The PBI2212 scored 90% in the R.A.P.S test process

The reason you buy a booster pack is to start vehicles that will not start under its own power – Make sure you have a booster unit that will keep on going

Schumacher PBI2212 Battery Booster Features

- 510 amps at 5 seconds jump starting output
- 1900 peak amps
- 185 cold cranking amps
- Professional grade high performance Hawker AGM Battery
- Isolating on/off switch
- Audible alarms signal; reverse polarity, over voltage (to protect 12v versions), connection reminder
- Two function digital display indicates internal and vehicles' battery voltage and % of charge when charging internal batteries. Also indicates charging systems voltage while engine running
- External 2 amp automatic charger for fast safe charging and maintenance
- Extra long and flexible 1.3m cables fitted with heavy duty replaceable clamps
- Auxiliary power output
- Easy wrap cable storages with clamp pockets
- Rubber boot to protect storage from knocks and bangs
